

URL: <https://dba-jxuy.onrender.com/>

Description: This is a python flask web application. The app connects to SQL to create and manage a database of users. User information can be added and then managed with the help of the app.

Deploying through render.com:

The app uses render.com to deploy from the connected github repository <https://github.com/Tomireg/DBA>.

Settings on render:

Set region to Frankfurt

Set an environment variable for the python version. PYTHON VERSION 3.12.2

Set repository: <https://github.com/Tomireg/DBA>

Set branch to main.

Set root directory to flask.

Add build command: pip install -r requirements.txt

Add start command: gunicorn app:app

Set auto-deploy to YES.
